10-YEAR LIMITED WARRANTY

FleetAero® side skirts are now available with FleetAero® warranty. For more information, please visit Fleetaero.com/warranty

The TrailerBlade™ Pup Trailer is a one-piece panel most commonly used for Box trucks and Straight trucks. Fleets can save 500+ gallons of fuel per year and reduce CO2 emissions by 6 tons annually.

TrailerBlade™ Pup Trailer side skirts are made entirely from the same durable materials used on the outside of your tractor-trailer. That's why they last longer than other side skirts in the market. In addition, the slide-in rubber skirt saves installation and repair time.

TrailerBlade™ Pup Trailer Struts

Our patented Mounting Strut is made of high-strength steel that pivots and articulates. This four-way adjustment prevents damage and ensures a perfect installation on every trailer. The slim profile resists snow, ice, and mud buildup. And the triple-coated galvanizing protects from the effects of corrosion.

Installation

With its modular design, TrailerBlade™ Pup Trailer installs faster than any side skirt on the market. No special tools are required. TrailerBlade™ products are all designed to be installed in less than one man hour.
